STEP 1	STEP 2	STEP 3	STEP 4	STEP 5
User scan using his smartphone camera the Stripe QR code from the physical device	Stripe payment page pop up with the option to pay directly with Apple Pay, G Pay or credit card	Once payment is approved, Stripe Webhook is configured to send a request to Google script via HTTPS protocol	Script read the message. Answer 200 to Stripe. Then save the data to Google Sheets and forward Stripe message through API to the fix IP of the router using HTTP protocol	IP forward to port 80 which is the ESP8266 module following the router config. The message will activate the designated relay to activate the credit

Screenshot of data log from Google Script to Google Sheet (Stripe data and ESP8266 acknowledgement)
